

## Chemical Handling Guidelines

1

Read label directions and the MSDS prior to use

2

Refer to MSDS for personal protective wear. Wash them after each use and store them in a dry, clean location.

3

**NEVER MIX 2 CHEMICALS TOGETHER**  
(Especially chlorinated and acidic products)

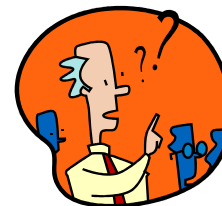

4

Only use chemicals that are labeled correctly and replace damaged or defaced labels immediately.

5

If you do not understand how to use the product correctly, read the directions on the label and/or ask your supervisor.

### NOTE:

Alkaline products burn the skin. A tell tale sign is a slimy feeling. Rinse the skin thoroughly with fresh water (until this sensation no longer exists). If in eyes rinse thoroughly with water for a minimum of 15 minutes.
