

# Contributing to a Cleaner, Safer Environment

At Master Australia, we are committed to reducing waste associated with our day to day operations, as well as being proactive in promoting new technologies that have a positive effect on our environment. These initiatives include;

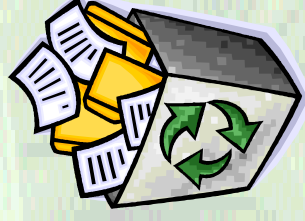

For Master Chemicals - manufacturing systems operate completely within plant site boundaries and produce no waste in the manufacturing process. This is achieved by heavy investment in water treatment and recycling systems which are integral to the manufacturing process.

Promoting the use of Electronically Converted Water (ecH<sub>2</sub>O) in floor scrubbers we sell. This technology eliminates the need for cleaning chemical by electrically converting water into an effective cleaning agent <http://www.masteraustralia.com.au/documents/Tennanttechobrochure.pdf>

Promoting the use of Tennant vacuums that are approved by the [National Asthma Council of Australia's \(NACA\), 'Sensitive Choice' program](#) as products that reduce the triggers of asthma and allergies.

Recycling of;

- Extension leads
- Vacuum motors
- Metal frames and bodies
- Batteries
- Cardboard
- Paper
